PROFESSIONAL EXPERIENCE

Software Engineering Intern | Microsoft (Mountain View, CA)

May 2026 - August 2026

- Selected by Principal-level leadership to engineer mission-critical, low-latency signaling microservices for the Teams global infrastructure.

Software Engineering Intern | Capital One (McLean, VA)

June 2025 - August 2025

- Engineered a serverless monitoring system (AWS Lambda, ECS, DynamoDB), improving uptime by ~25% and reducing downtime risk by ~60% across mission-critical systems supporting 1,000+ employees.
- Architected Dockerized, event-driven microservices for automated health checks and failure recovery, reducing manual monitoring effort by ~45% and enabling near real-time issue detection.
- Built and integrated observability pipelines using New Relic, AWS CloudWatch, and custom telemetry agents, reducing mean time to detection (MTTD) by ~40% and accelerating incident response by ~35%.
- Collaborated with the Business Cards & Payments Tech team to deliver highly reliable systems meeting 99.99% uptime SLOs and internal compliance standards.

Technical Director and Engineer | Gochi - Roblox

June 2024 - June 2025

- Led development of a real-time multiplayer Roblox experience using Node.js, Lua, and service-oriented architecture supporting 2,500+ MAUs, improving stability by 35% and retention by 20%.

PROJECTS

MealMatch

April 2026 - Present

- Architected a high-performance backend using FastAPI with a write-through caching strategy, utilizing in-memory dictionaries as a hot-path store to achieve <20ms average latency for active listing retrieval.
- Engineered a geospatial "Smart Match" engine that ranks listings by proximity and urgency, integrating Google Geocoding and Haversine algorithms to optimize food distribution efficiency by ~30%.
- Developed a robust telemetry and observability framework, implementing automated error-logging pipelines for remote map diagnostics and a role-gated audit system to ensure data integrity across 1,000+ concurrent listing pins.
- Validated system throughput under simulated load, achieving ~250 claims per second while maintaining sub-second consistency between the in-memory state and the persistent SQLite layer.

Niche

September 2025 - Present

- Built a full-stack application featuring a machine learning-based recommendation system (collaborative filtering), improving recommendation relevance and increasing user engagement by ~25%.
- Developed React and React Native frontends with caching, lazy loading, and database indexing, reducing average load time by ~1.5 seconds (~30-40%).
- Designed backend services using Flask, Node.js, and MongoDB (geospatial indexing) to support low-latency, scalable recommendation queries.

StudyBuddy Scheduler

January 2025 - June 2025

- Engineered a full-stack scheduling platform using FastAPI and ReactPy, implementing priority queues and greedy algorithms to generate schedules ~35% faster.
- Optimized backend performance and data structures, reducing API response time by ~30% and improving system efficiency.
- Built data visualizations and integrated external APIs, contributing to ~20% increase in daily user engagement.

EDUCATION AND SKILLS

University of Maryland, College Park | GPA: 3.88

May 2027

B.S. Information Science

Relevant Coursework: Technical Infrastructure & Systems Architecture; Data Structures and Algorithms; Data Science Techniques; Database Design (MySQL); Object-Oriented Programming; Machine Learning in Communication; Statistics for Information Science (R); Information Organization; Organizations, Management, and Teamwork; Entrepreneurial Opportunity Analysis

Skills: Python, Java, JavaScript, C#, TypeScript, Lua, R, SQL | Flask, FastAPI, Express, React, React Native | AWS (Lambda, ECS Fargate, DynamoDB, CloudWatch), .NET, Microsoft Azure, Docker, Serverless, CI/CD (GitHub Actions), WebSockets | MongoDB, PostgreSQL, Event-Driven Systems, Microservices, Distributed Systems, Caching | PyTest, Jest, New Relic | Data Structures & Algorithms, JWT Authentication, AI/ML Fundamentals
